

HUB ANNOUNCES PARTNERSHIP TO REDUCE ORTHOPEDIC SURGERY COSTS FOR EMPLOYERS

A new collaboration between HUB International Gulf South and Regenexx, an interventional orthopedic clinic network, offers client companies an added benefit to successfully reduce high-cost musculoskeletal surgeries.

Employees of companies enrolled in HUB Gulf South now have access to the Regenexx procedures which effectively intervene on 70% of orthopedic injuries and conditions where surgery was previously the only solution*. This interventional approach enables employers to save up to 70% of orthopedic costs while providing best-in-class outcomes. The Regenexx process of treating musculoskeletal conditions involves a high level of physician skill and patented protocols to customize cell-based treatments which are only achieved through their standards of practice.

“When it comes to solving America’s healthcare crisis, employers seeking innovative ways to reduce unnecessary costs while enhancing their benefits package is the answer,” states Denny Bass, Senior Vice President, HUB International

Gulf South. “With Regenexx, HUB gains a partner dedicated to treating musculoskeletal injury, which is typically the leading diagnosis area for employer health plans in terms of total spend.” HUB International is now able to expand its clinical reach to this high cost area for employer clients through Regenexx.

“Employers who partner with Regenexx not only report a significant drop in the need for high risk orthopedic surgeries, they show less absenteeism which provides an enhanced benefits package,” says Jason Hellickson, CEO Regenexx. “In fact, when given the choice of a traditional surgical procedure or a Regenexx procedure, employees are choosing to pursue Regenexx a majority of the time. This is a win-win solution for employers that actually offer employees additional benefits at their disposal for orthopedic healthcare.

*This applies only to elective orthopedic surgery without fracture related care and acute care trauma.

“When it comes to solving America’s healthcare crisis, employers seeking innovative ways to reduce unnecessary costs while enhancing their benefits package is the answer.”
