

MUSCULOSKELETAL COST SAVINGS

INTERVENTIONAL ORTHOPEDICS

Regenexx offers self-funded employers a musculoskeletal cost-savings strategy effective for up to 70 percent of elective orthopedic conditions. Our Interventional orthopedics procedures use the body's own cells derived for from blood and bone marrow to replace expensive invasive surgery with image-guided injections.

COST-SAVINGS OPPORTUNITY

Approximately 15-20 percent of health-plan spending is on musculoskeletal conditions and elective surgery represents more than 50 percent of that spending (7.5 percent to 10 percent of total plan costs). Regenexx can reduce the cost of individual surgeries by as much as 70 percent*. We report to employers quarterly on surgeries avoided to provide a transparent look at cost savings.

Businesses that partner with Regenexx also are providing a valued benefit to members. With over 180 locations across the U.S Regenexx works with employers in all 50 states, and has a robust telemedicine program. Average return to work is under two days. Patient reported outcomes by body part, are published on our [website](#).

TRACTION IN THE MARKETPLACE

SELF-FUNDED

Regenexx works 3500+ self funded employers in every industry, and all sizes. With this kind of experience we have a simple implementation and utilization strategy. Regenexx has no cost (PEPM) to the plan sponsor and comes with a national, fixed fee schedule. You only pay when you use the benefit.

BROKERS

Dozens of brokerage firms across the U.S. have added Regenexx coverage to their own self-funded plan and are proactively taking the Regenexx strategy to their self-funded clients. We work with hundreds of benefits advisors and consultant who implement Regenexx for their clients.

THIRD-PARTY ADMINISTRATORS

Several third-party administrators have added Regenexx for all of their self-funded clients as part of their strategy to reduce costs. We have set up claims processing with over 150+ different TPAs from independent to carrier ASOs.

STOP-LOSS COVERAGE

Over 130 stop loss carriers will mirror the Regenexx amendment and cover our procedures as part of the plan. We also offer a stand-alone policy.

NEXT STEPS

Pick a group and let's run an ROI Analysis and Geomap and show whats possible. Adding Regenexx is easy with our implementation guide. We'll walk you through the process.

WHAT ARE EMPLOYEES SAYING

Regenexx is about transforming health care for your employees. Without Interventional Orthopedics many would have limited choice about their own care.

I appreciate that my employer provided payment for a less invasive and more effective option.

It was on my wife's plan. I never could have afforded this procedure if it wasn't covered. We are so blessed.

THEY ARE GETTING BETTER

I'm more active since the procedure on my knees, and I'm thankful for the short recovery time.

I now am able to walk, and most importantly, to work!

My life is better since having this procedure.

WHAT EMPLOYERS ARE SAYING

Regenexx was brought to us by our benefits advisors. Regenexx not only works, it greatly reduces downtime, pain, and risk, removes a lot of the anxiety of surgery.

Sandi Judson, VP of HR
Behler-Young Company

"Implementing Regenexx into our plan was very easy. My team would definitely recommend that any health plan get in touch with Regenexx to find out about the benefits they can bring to your employees."

Linda Wyatt
Vice President of
Human Resources

THE REGENEXX DIFFERENCE

Our commitment to our patients means we do things differently. For more than 20 years, Regenexx has been monitoring and tracking our outcomes on more than 250,000 procedures. Anyone can review our outcomes, which are reported in real time on our website.

We invest in research and development, and continuous quality improvement. Regenexx is finding more effective ways to treat patients, and we adjust our candidacy standards to ensure that we only intervene when we can help. We routinely publish our research, including randomized controlled trials.

We recruit physicians based on their clinical expertise, and have a very high bar. It's the top 1 percent of physicians who have the skills to be a Regenexx provider.

Regenexx has an internal prior auth process where we assure each patient who is referred to a procedure has first completed conservative care like physical therapy, medications, and other injections already part of the plan or have been recommended surgery by an orthopedic surgeon.

We'll also work with Direct Primary Care and other navigation services to assure appropriate referrals.

We hope you'll consider adding the Regenexx option to your health plan.
